

LeaderShares[®] AlphaFactor[®] Tactical Focused ETF

SUMMARY PROSPECTUS

March 1, 2026

LSAT

a series of Two Roads Shared Trust

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. The Fund's Prospectus and Statement of Additional Information, both dated March 1, 2026, as supplemented to date, are incorporated by reference into this Summary Prospectus. You can obtain these documents, reports to shareholders, and other information about the Fund online at <https://www.leadersharetfs.com/funds/leadersharetfs-tactical-focused-etf>. You can also obtain these documents at no cost by calling 1-(888) 617-1444 or by sending an email request to info@leadersharetfs.com. Shares of the Fund are listed and traded on the New York Stock Exchange ("NYSE") (the "Exchange").

Investment Objective: The LeaderShares[®] AlphaFactor[®] Tactical Focused ETF (the "Tactical ETF" or the "Fund") seeks to generate long term capital growth.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee ⁽¹⁾	0.99%
Distribution (12b-1) and Service Fees	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.99%

(1) The Fund's adviser provides investment advisory service, and pays most of the Fund's operating expenses (except all brokerage fees and commissions, taxes, borrowing costs (such as dividend expense on securities sold short and interest), fees and expenses of other investment companies in which the Fund may invest, and extraordinary or non-recurring expenses such as litigation to which a Fund may be a party and indemnification of the Trustees and officers with respect thereto) in return for a "unitary fee."

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$101	\$315	\$547	\$1,213

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund's performance. For the fiscal year ended October 31, 2025, the Fund's Portfolio Turnover rate was 189% of the average value of its portfolio.

Principal Investment Strategies: The Fund is an actively managed exchange-traded fund (“ETF”) that employs an investment approach that utilizes a quantitative factor-based investment methodology focused on U.S. equities. The Adviser selects stocks based on a number of characteristics that include, but are not limited to, net share count reduction, free cash flow growth, dividend yield, volatility and debt/asset ratios. The final selection of stocks is based on market characteristics including, but not limited to, liquidity and market capitalization. The Fund expects the average daily trading volume of shares in companies being selected to be in excess of 400,000 shares per day at the time of purchase, however average daily trading volume may change due to market fluctuations. In addition, the Fund expects the market capitalization of the companies in which it invests to be \$1 billion and greater, however this could change due to market fluctuations. The Fund will typically be invested in a diversified portfolio of equity securities of companies with market capitalizations of at least \$1 billion at the time of initial purchase. The Adviser employs a multi-factor tactical risk management overlay that seeks to identify periods of above average risk. **At times identified by the Adviser as above average risk, the Fund may exit positions in equity securities and become comprised primarily of money market instruments such as treasury bills, certificates of deposit and commercial paper and other short-term instruments, and money market funds, or U.S. government bonds.** Such investments can either be direct or through investments in other investment companies, including ETFs. In identifying a time as above average risk, the Fund will consider multiple factors including negative market performance and negative market technical indicators such as advance versus decline breadth, as well as a proprietary set of supply and demand and economic factors.

The Fund may focus its investments in a particular sector, industry or group of industries.

The Fund may engage in active and frequent trading.

Principal Investment Risks: As with all funds, there is the risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. Many factors affect the Fund’s net asset value and performance. As with any fund, there is no guarantee that the Fund will achieve its goal. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors.

The Fund may be subject to the risks described below through its own direct investments and indirectly through its investments in other investment companies, such as ETFs.

- *Market Risk.* Overall market risk may affect the value of individual instruments in which the Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund’s performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, military conflict, acts of terrorism, social unrest, natural disasters, recessions, inflation, changes in interest rate levels, supply chain disruptions, sanctions, tariffs the spread of infectious illness or other public health threats, lack of liquidity in the bond markets, volatility in the securities markets or adverse investor sentiment and political events affect the securities markets. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future. Securities markets also may experience long periods of decline in value. A change in financial condition or other event affecting a single issuer or market may adversely impact securities markets as a whole. The value of assets or income from an investment may be worth less in the future as inflation decreases the value of money. As inflation increases, the real value of the Fund’s assets can decline as can the value of the Fund’s distributions. When the value of the Fund’s investments goes down, your investment in the Fund decreases in value and you could lose money.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund’s net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments’ reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

- *Active Trading Risk.* A higher portfolio turnover due to active and frequent trading will result in higher transaction and brokerage costs associated with the turnover which may reduce the Fund's return, unless the securities traded can be bought and sold without corresponding commission costs. Active trading of securities may also increase the Fund's realized capital gains and losses, which may affect the taxes you pay as a Fund shareholder.
- *Volatility Risk.* The Fund's investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund's portfolio may fluctuate due to factors that affect markets generally or that affect a particular industry or sector. The value of an investment in the Fund's portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund's net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.
- *ETF Structure Risks.* The Fund is structured as an ETF and as a result is subject to special risks. Shares are not individually redeemable and may be redeemed by the Fund at net asset value only in large blocks known as "Creation Units." An investor may incur brokerage costs purchasing enough shares to constitute a Creation Unit. Trading in shares on the exchange on which the Fund is listed may be halted due to market conditions or for reasons that, in the view of the exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares. The market prices of shares will fluctuate in response to changes in net asset value and supply and demand for shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. Shares may trade at a discount or premium to net asset value. If a shareholder purchases shares at a time when the market price is at a premium to the net asset value or sells shares at a time when the market price is at a discount to net asset value, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholder for the shares. There may be times when the market price and the net asset value vary significantly. For example, in times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of the Fund's shares and the Fund's net asset value. When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund's shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value. In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value.
- *Quantitative Investing Risk.* The Adviser may use proprietary computer trading modeling systems to implement its investment strategies for the Fund. Investments selected using these models may perform differently than the market as a whole or from their expected performance as a result of the factors used in the models, the weight placed on each factor, changes from the factors' historical trends and technical issues in the construction and implementation of the models. There is no assurance that the models are complete or accurate, or representative of future market cycles, nor will they necessarily be beneficial to the Fund if they are accurate. These systems may negatively affect Fund performance for various reasons, including human judgment, inaccuracy of historical data and non-quantitative factors (such as market or trading system dysfunctions, investor fear or over-reaction).
- *Equity Risk.* Equity securities are susceptible to general market fluctuations, volatile increases and decreases in value as market confidence in and perceptions of their issuers change and unexpected trading activity among retail investors. Factors that may influence the price of equity securities include developments affecting a specific company or industry, or the changing economic, political or market conditions.
- *Authorized Participant Concentration Risk.* To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to net asset value ("NAV") and may face delisting.
- *Cash Positions Risk.* The Fund may hold a significant position in cash and/or cash equivalent securities. When the Fund's investment in cash or cash equivalent securities increases, the Fund may not participate in market advances or declines to the same extent that it would if the Fund were more fully invested.
- *Cybersecurity Risk.* There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the investment adviser, custodian, transfer agent, distributor and financial intermediaries ("Service Providers") to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its Service Providers may adversely impact the Fund or its shareholders.

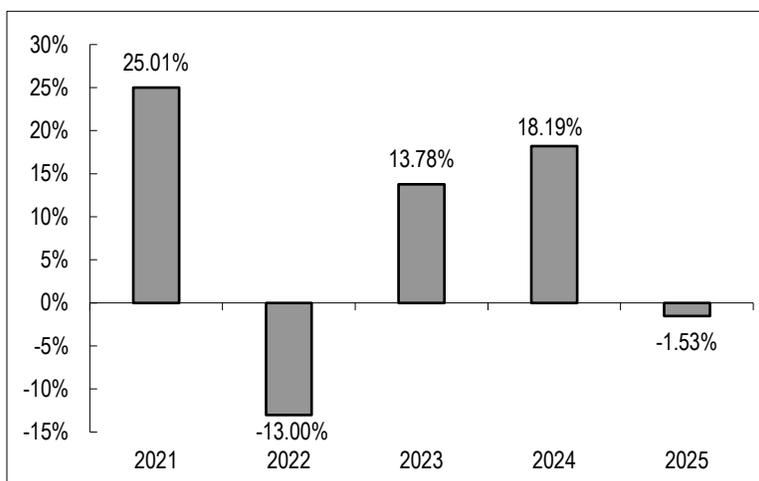

- *Fluctuation of Net Asset Value Risk.* Unlike conventional ETFs, the Fund is not an index fund. The Fund is actively managed and does not seek to replicate the performance of a specified index. The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund's holdings trading individually or in the aggregate at any point in time. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the shares will trade at premiums or discounts to NAV.
- *Focus Risk.* The Fund generally expects to invest in approximately 30 stocks at any given time, and as a result, the Fund's performance may be more volatile than the performance of funds holding more securities.
- *Gap Risk.* The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit from the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. Trading halts may lead to gap risk. Trading halts may lead to gap risk.
- *Investment Companies Risk.* When the Fund invests in other investment companies, (including open-end mutual funds or ETFs), it will bear additional expenses based on its pro rata share of the other investment company's operating expenses, including the management fees of unaffiliated funds in addition to those paid by the Fund. The risk of owning an investment company generally reflects the risks of owning the underlying investments held by the investment company. The Fund may also incur brokerage costs when it purchases and sells shares of investment companies. An ETF's shares could trade at a significant premium or discount to its net asset value (NAV).
- *Management Risk.* The Fund's investment strategies may not result in an increase in the value of your investment or in overall performance equal to other similar investment vehicles having similar investment strategies. Management risk includes the risk that the quantitative model used by the Adviser may not perform as expected, particularly in volatile markets. In addition, the Fund's tactical asset allocation strategy may be unsuccessful and may cause the Fund to miss attractive investment opportunities while in a defensive position.
- *Market Capitalization Risk.* The Fund's anticipated weighting towards larger-sized companies subjects the Fund to the risk that larger companies may not be able to attain the high growth rates of successful smaller companies, especially during strong economic periods, and that they may be less capable of responding quickly to competitive challenges and industry changes. Because the Fund may invest in companies of any size, its share price could be more volatile than a fund that invests only in large companies. Small and medium-sized companies typically have less experienced management, narrower product lines, more limited financial resources, and less publicly available information than larger companies. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies.
- *Market Events Risk.* There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions are an inevitable part of investing in capital markets and may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, took steps to support financial markets, including by lowering interest rates to historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. When the U.S. government and the Federal Reserve reduce market support activities, including by increasing interest rates, such reductions could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also contribute to decreased liquidity and increased volatility in the financial markets. The impact of these influences on the markets, and the practical implications for market participants, may not be fully known for some time.
- *Money Market Instrument Risk.* The value of money market instruments may be affected by changing interest rates and by changes in the credit ratings of the investments. An investment in a money market fund is not insured or guaranteed by the FDIC or any other government agency. It is possible to lose money by investing in a money market fund. Although money market mutual funds that invest in U.S. government securities seek to preserve the value of the Fund's investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market mutual fund. Moreover, SEC rules require prime money market mutual funds to use floating NAVs that do not preserve the value of the Fund's investment at \$1.00 per share. The SEC's amendments to money market fund rules intended to address potential systemic risks associated with money market funds and to improve transparency for money market fund investors. The money market fund reforms may impact the structure, operations and return potential of the money market funds in which the Fund invests.

- *Rules-Based Strategy Risk.* A rules-based investment strategy may not be successful on an ongoing basis or could contain unknown errors. In addition, the data used may be inaccurate or the computer programming used to create a rules-based investment strategy might contain one or more errors. Moreover, during periods of increased volatility or changing market conditions the commonality of portfolio holdings and similarities between strategies of rules-based managers may amplify losses.
- *Sector Risk.* The risk that if the Fund invests a significant portion of its total assets in certain issuers within the same economic sector, an economic, business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health crisis, adversely affecting that sector or region may affect the value of the Fund's investments more than if the Fund's investments were not so concentrated. While the Fund may not concentrate in any one industry, the Fund may invest without limitation in a particular sector. Economic, legislative, or regulatory developments may occur that significantly affect an entire sector. This may cause the Fund's NAV to fluctuate more than that of a fund that does not focus in a particular sector.
 - *Communications Sector Risk.* Companies in the communications services sector are subject to the risk that they will underperform the market as a whole due to legislative or regulatory changes, adverse market conditions such as intense competition and changes in consumer preferences, and/or technological innovation and obsolescence of existing technology
 - *Consumer Discretionary Sector Risk.* The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, competition, consumer confidence, changes in demographics and consumer preferences. Companies in the consumer discretionary sector depend heavily on disposable household income and consumer spending, and may be strongly affected by social trends and marketing campaigns. These companies may be subject to severe competition, which may have an adverse impact on their profitability. In addition, the impact of any epidemic, pandemic or natural disaster, or widespread fear that such events may occur, could negatively affect the global economy and, in turn, negatively affect companies in the consumer discretionary sector.
 - *Consumer Staples Sector Risk.* The consumer staples sector may be affected by the regulation of various product components and production methods, commodity price volatility, imposition of import controls, increased competition, depletion of resources, marketing campaigns and other factors affecting consumer demand.
 - *Energy Sector Risk.* The energy sector is comprised of energy, industrial, consumer, infrastructure and logistics companies, and therefore will be susceptible to adverse economic, environmental, business, regulatory or other occurrences affecting that sector. The energy sector has historically experienced substantial price volatility. At times, the performance of energy sector investments may lag the performance of other sectors or the market as a whole. Companies operating in the energy sector are subject to specific risks, including, among others, fluctuations in commodity prices; reduced consumer demand for commodities such as oil, natural gas or petroleum products; reduced availability of natural gas or other commodities for transporting, processing, storing or delivering; slowdowns in new construction; extreme weather or other natural disasters; and threats of attack by terrorists on energy assets. The energy markets have experienced significant volatility in recent periods, including a historic drop in crude oil and natural gas prices in April 2020 attributable to the significant decrease in demand for oil and other energy commodities as a result of the slowdown in economic activity due to the COVID-19 pandemic as well as price competition among key oil-producing countries. Future pandemics could lead to reduced production and price volatility.
 - *Financials Sector Risk.* The financials sector includes companies in the banks, capital markets, diversified financials, and insurance industry groups. Performance of companies in the financials sector may be adversely impacted by many factors, including, among others, changes in government regulations, economic conditions, and interest rates, credit rating downgrades, and decreased liquidity in credit markets. The extent to which the Fund may invest in a company that engages in securities-related activities or banking is limited by applicable law. The impact of changes in capital requirements and recent or future regulation of any individual financial company, or of the financials sector as a whole, cannot be predicted. In recent years, cyber-attacks and technology malfunctions and failures have become increasingly frequent in this sector and have caused significant losses to companies in this sector, which may negatively impact the Fund
 - *Healthcare Sector Risk.* The healthcare sector may be affected by government regulations and government healthcare programs, increases or decreases in the cost of medical products and services and product liability claims, among other factors. Healthcare companies are subject to competitive forces that may result in price discounting.
 - *Industrials Sector Risk.* The industrials sector is subject to risks related to general economic conditions, changes in interest rates, commodity and energy prices, and the pace of infrastructure and capital spending. Companies in the industrials sector may be adversely affected by manufacturing and supply chain disruptions, fluctuations in demand for transportation and logistics services, labor shortages and rising labor costs, and changes in government regulation and spending priorities (including defense spending). Many industrial companies are also exposed to risks associated with international trade, including tariffs, sanctions, and other barriers to trade, as well as currency fluctuations and geopolitical events. In addition, industrial companies may be subject to significant competition and rapid technological change, and may be affected by product liability claims, environmental liabilities, and catastrophic events such as natural disasters.

- *Information Technology Sector Risk.* The information technology sector is subject to risks related to rapid technological change, product obsolescence, short product cycles, and intense competition. Technology companies may be adversely affected by the introduction of new products and services, changing consumer preferences, and the failure to successfully innovate. These companies may face risks associated with cyber-attacks, data breaches, and other information security incidents, as well as system failures and disruptions in technology infrastructure. Technology companies may also be affected by intellectual property disputes, litigation, evolving privacy and data protection laws and regulations, and restrictions on cross-border data flows. Many technology companies rely on global supply chains and third-party vendors and may be impacted by supply shortages, increased costs, and geopolitical or trade-related disruptions.
- *Materials Sector Risk.* The materials sector is subject to risks related to commodity price volatility, changes in demand from global economic cycles, and the availability and cost of raw materials. Companies in the materials sector may be adversely affected by inflation, fluctuations in energy prices, and changes in interest rates, as well as supply chain constraints and transportation disruptions. Materials companies may also face significant environmental, health, and safety risks and liabilities, including costs associated with compliance with environmental regulations, remediation, and litigation. In addition, the materials sector may be negatively impacted by trade restrictions, tariffs, and other geopolitical events, as well as competition and technological changes that affect production methods and end-market demand.
- *Real Estate Sector Risk.* The real estate sector is subject to risks related to declines in property values, adverse economic conditions, and changes in interest rates. Real estate companies and real estate-related investments may be adversely affected by rising interest rates, tightening credit conditions, refinancing risk, and reduced access to capital, which can increase borrowing costs and depress property valuations. Real estate investments may be affected by changes in occupancy rates, tenant defaults, rental income levels, and the supply of and demand for properties. In addition, real estate companies may be subject to risks associated with environmental conditions and liabilities, natural disasters, climate-related events, and changes in zoning or land-use regulations. Real estate companies may also be impacted by regional economic conditions, demographic trends, and shifts in work or shopping patterns (including increased remote work and e-commerce).
- *Utilities Sector Risk.* The utilities sector is subject to risks related to changes in interest rates, regulation, and the costs of providing services. Utilities companies may be adversely affected by changes in government regulation, including rate-setting and environmental requirements, as well as increased competition due to deregulation or technological developments. Utilities companies can be sensitive to rising interest rates because they often carry significant debt and may be perceived as income-oriented investments. The utilities sector may also be affected by fuel and energy costs, supply disruptions, infrastructure failures, and catastrophic events such as storms, wildfires, droughts, or other natural disasters. In addition, utilities companies may face risks related to climate change, increased capital expenditures to modernize infrastructure, and liabilities arising from accidents or service interruptions.
- *Sector Risk.* The risk that if the Fund invests a significant portion of its total assets in certain issuers within the same economic sector, an economic, business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health crisis, adversely affecting that sector or region may affect the value of the Fund's investments more than if the Fund's investments were not so concentrated. While the Fund may not concentrate in any one industry, the Fund may invest without limitation in a particular sector. Economic, legislative, or regulatory developments may occur that significantly affect an entire sector. This may cause the Fund's NAV to fluctuate more than that of a fund that does not focus in a particular sector.
- *Tactical Overlay Strategy Risk.* The Adviser employs a multi-factor tactical risk management overlay that seeks to identify periods of above average risk and exit positions in equity securities during such periods of above average risk. The failure of the overlay strategy to timely or properly identify periods of above average risk may prevent the Fund from avoiding losses in bad markets or may cause the Fund to miss gains in good markets.
- *Underlying Funds Risk.* The risk that the Fund's investment performance and its ability to achieve its investment objective are directly related to the performance of the underlying funds in which it invests. There can be no assurance that the Fund's investments in underlying funds will achieve their respective investment objectives. The Fund is subject to the risks of the underlying funds in direct proportion to the allocation of its assets among the underlying funds.
- *U.S. Government Securities Risk.* The U.S. government is not obligated to provide financial support to its agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Certain U.S. government securities purchased by the Fund may not be backed by the full faith and credit of the United States. It is possible that the issuers of such securities will not have the funds to meet their payment obligations in the future.

Performance: The bar chart and performance table below show the variability of the Fund's returns, which is some indication of the risks of investing in the Fund by comparing the Fund's performance with a broad measure of market performance. The bar chart shows performance of the Fund's shares for each calendar year since the Fund's inception. The performance table includes a comparison of the performance of the Fund over time to the performance of a broad-based securities market index. You should be aware that the Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Updated performance information will be available at no cost by visiting www.leadersharetfs.com or by calling 1-480-757-4277.

Performance Bar Chart For Calendar Years Ended December 31st:

Highest Quarter:	03/31/2024	12.50%
Lowest Quarter:	06/30/2022	-13.81%

**Performance Table
Average Annual Total Returns
(For the year ended December 31, 2025)**

	One Year	Five Year	Since Inception ⁽¹⁾
Return before taxes	-1.53%	7.57%	10.84%
Return after taxes on Distributions	-1.96%	7.20%	10.46%
Return after taxes on Distributions and Sale of Fund Shares	-0.59%	5.91%	8.60%
S&P 500 Index ⁽²⁾ (reflect no deduction for fees, expenses, or taxes)	17.88%	14.42%	16.16%

(1) Inception date is October 26, 2020

(2) The S&P 500 Index is a market-capitalization-weighted index of the 500 largest U.S. publicly traded companies. The S&P 500 Index is a float-weighted index, meaning company market capitalizations are adjusted by the number of shares available for public trading. Investors cannot invest directly in an index or benchmark. Index returns are gross of any fees, brokerage commissions or other expenses of investing.

Investment Adviser: Redwood Investment Management, LLC (the “Adviser”) serves as investment adviser to the Fund.

Portfolio Manager: The Fund is managed by a team comprised of Michael T. Messinger, Portfolio Manager and Managing Partner of Redwood, Richard M. Duff, Portfolio Manager and Managing Partner of Redwood, and Michael T. Cheung, Portfolio Manager and Managing Partner. Mr. Messinger, Mr. Duff, and Mr. Cheung have managed the Fund since its inception in October, 2020.

Purchase and Sale of Fund Shares: The Fund will issue and redeem shares at NAV only in large blocks of 25,000 shares (each block of shares is called a “Creation Unit”). Creation Units are issued and redeemed for cash and/or in-kind for securities. Except when aggregated in Creation Units, the shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on NYSE Arca, Inc. (“NYSE Arca” or the “Exchange”) and trade at market prices rather than NAV. Individual shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at market price. Because shares trade at market prices, rather than NAV, shares of the Fund may trade at a price that is greater than NAV (*i.e.*, a premium), or less than NAV (*i.e.*, a discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”).

Recent information, including information about the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund’s website at www.leadersharetfs.com.

Tax Information: The Fund’s distributions generally will be taxable at ordinary income or long-term capital gain rates. A sale of shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies, including the Adviser, may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
